

# GYMNASIUM CURTAINS

## GC-2 Walkdraw Gymnasium Divider Curtain

This curtain is the most economical divider to install and maintain. It is available in a variety of styles, colours and weights. The storage of the curtain is usually at one side of the gymnasium, perpendicular to the wall or along the side of a wall if a storage area exists. It can be supplied in two sections with the lower 8 feet (2450mm) equipped with Velcro® strips on both leading edges to facilitate closing of the curtains.

A carrier with dual wheels mounted on ball-bearings is provided every 12" (305mm) along the length of the curtain. A master carrier is provided at both ends to facilitate curtain movement during placement and retraction.

The track is a heavy-duty double-T extruded aluminum and is supported every 4' to 6' (1220 to 1830mm). The advantage of this type of track is that it is extremely durable and easily spliced. The track can be bent at the job site to facilitate installation and is suitable for both nylon and steel wheeled carriers. Splices and track clamps can be attached to the upper half of the track and will not affect the smooth operation of the curtain. The curtain is attached to the carriers by sturdy S-hooks and plated adjusting chains.

The curtain is fabricated with 18 oz. (0.61 kg/m<sup>2</sup>) or 25 oz. (0.85 kg/m<sup>2</sup>) vinyl-coated polyester with similar appearance and embossed on both sides. Curtains can be supplied in solid vinyl or with the bottom 10 feet (3056mm) in solid vinyl with an alternative material for the top portion.

All Qued Walkdraw curtains bear a certification label from an accredited testing laboratory stating the fire and smoke rating on small and large scale tests.

The top of the curtain contains a 3" (76mm) band of hemp that is totally concealed and quadruple sewn. #4 grommets are used at each end of the curtain at 3" (76mm) centers to accept the master carriers. The side are hemmed over 2" (50mm) and double sewn to give a clean durable edge. The bottom of the curtain has an 8" (203mm) pocket hemmed over and double sewn. The curtain is supplied with a draw string (leader) in the lower pocket to pull through a 3/16" (5mm) diameter chain if required. The width of curtain must be ordered 10 percent larger than the width of the gymnasium to allow for fullness.

### Sport net

The lower 10 feet (3056mm) of the curtain is 18oz (0.61 kg/m<sup>2</sup>) or 25oz (0.85 kg/m<sup>2</sup>) of vinyl. The upper portion contains 1-1/4" square netting, coated to match the base color of the curtain. The curtain allows light and ventilation systems to function normally and does not break down from sport activities and continual use. All vinyl material on the top portion of the curtain is doubled to conceal the edges of the net and double sewn except on the top and transitional center bands which are quadruple sewn.

### Archery

The lower 10 feet (3056mm) of the curtain is 18oz (0.61 kg/m<sup>2</sup>) or 25oz (0.85 kg/m<sup>2</sup>) of vinyl. The upper portion contains 3/16" heavy-duty natural color polyester archery netting. This net is extremely strong and is heat set for durability.

Note: Closeness of mesh construction reduces light transmission.

### Fleximesh

The lower 10 feet (3056mm) of the curtain is 18oz (0.61 kg/m<sup>2</sup>) or 25oz (0.85 kg/m<sup>2</sup>) of vinyl. The upper portion is vinyl coated polyester mesh weighing 7oz (0.24 kg/m<sup>2</sup>) and is white in color. The mesh is treated for fire resistance and UV degradation.

Note: Not suitable for dusty environments.
